

Chocolate Sales Dashboard Documentation

1. Executive Summary

This dashboard provides an executive view of chocolate sales performance using interactive Power BI visuals.

2. Business Problem

Decision makers require a centralized dashboard to monitor revenue, costs, profit, shipments and product performance.

3. Objectives

Track KPIs, compare regions, monitor trends, identify profitable products, enable interactive filtering.

4. Dataset

Dataset contains sales transactions with dates, products, regions, countries, boxes, costs, shipments and sales.

5. Data Model

A star-schema style model with fact sales table connected to dimension tables such as Date, Product and Geography.

6. DAX Measures

Core measures: Total Sales, Total Cost, Profit, Profit %, Total Boxes and Shipments.

7. Dashboard Walkthrough

Top KPI cards summarize performance. Line chart shows monthly trends. Donut chart compares regions. Histogram shows shipment distribution. Table highlights product profitability. Slicers enable interactive analysis.

8. Business Insights

Profit margin is approximately 60%. Product profitability varies significantly. Regional contribution highlights key markets.

9. Recommendations

Increase investment in high-margin products, optimize low-performing regions, improve shipment efficiency.

10. Conclusion

The dashboard demonstrates practical Power BI, DAX, data modeling and business intelligence skills suitable for a Data Analyst portfolio.
